An Introduction to Scientific Research Methods in Geography and Environmental Studies

Daniel R. Montello, Paul Sutton

An Introduction to Scientific Research Methods in Geography and Environmental Studies Daniel R. Montello, Paul Sutton

"Covers a broad range of subjects that undergraduates in the discipline should be familiar and comfortable with upon graduation. From chapters on the scientific method and fundamental research concepts, to experimental design, sampling and statistical analysis, the text offers an excellent introduction to the key concepts of geographical research. The content is applicable for students at the beginning of their studies right through to planning and conducting dissertations. The book has also been of particular support in designing my level 1 and 2 tutorials which cover similar ground to several of the chapters."

- Joseph Mallalieu, School of Geography, Leeds University

"Montello and Sutton is one of the best texts I've used in seminars on research methodology. The text offers a clear balance of quantitative vs. qualitative and physical vs. human which I've found particularly valuable. The chapters on research ethics, scientific communication, information technologies and data visualization are excellent."

- Kenneth E. Foote, Department of Geography, University of Colorado at Boulder

This is a broad and integrative introduction to the conduct and interpretation of scientific research, covering both geography and environmental studies. Written for undergraduate and postgraduate students, it:

- Explains both the conceptual and the technical aspects of research, as well as all phases of the research process
- Combines approaches in physical geography and environmental science, human geography and human-environment relations, and geographic and environmental information techniques (such as GIS, cartography, and remote sensing)
- Combines natural and social scientific approaches common to subjects in geography and environmental studies
- Includes case studies of actual research projects to demonstrate the breadth of approaches taken

It will be core reading for students studying scientific research methods in geography, environmental studies and related disciplines such as planning and earth science.

From reader reviews:

Louie Thompson:

Reading a e-book can be one of a lot of activity that everyone in the world adores. Do you like reading book thus. There are a lot of reasons why people enjoy it. First reading a e-book will give you a lot of new facts. When you read a book you will get new information because book is one of a number of ways to share the information or perhaps their idea. Second, reading through a book will make you more imaginative. When you reading a book especially fictional works book the author will bring that you imagine the story how the characters do it anything. Third, you are able to share your knowledge to others. When you read this An Introduction to Scientific Research Methods in Geography and Environmental Studies, you are able to tells your family, friends in addition to soon about yours e-book. Your knowledge can inspire average, make them reading a guide.

Debra Davis:

This An Introduction to Scientific Research Methods in Geography and Environmental Studies is great book for you because the content that is certainly full of information for you who all always deal with world and get to make decision every minute. That book reveal it data accurately using great coordinate word or we can state no rambling sentences in it. So if you are read it hurriedly you can have whole data in it. Doesn't mean it only provides straight forward sentences but tough core information with beautiful delivering sentences. Having An Introduction to Scientific Research Methods in Geography and Environmental Studies in your hand like finding the world in your arm, information in it is not ridiculous 1. We can say that no guide that offer you world within ten or fifteen small right but this e-book already do that. So , this is good reading book. Hello Mr. and Mrs. stressful do you still doubt that will?

Frank Johnson:

The book untitled An Introduction to Scientific Research Methods in Geography and Environmental Studies contain a lot of information on the idea. The writer explains the girl idea with easy technique. The language is very straightforward all the people, so do not necessarily worry, you can easy to read this. The book was written by famous author. The author will bring you in the new age of literary works. You can easily read this book because you can read more your smart phone, or gadget, so you can read the book inside anywhere and anytime. If you want to buy the e-book, you can wide open their official web-site in addition to order it. Have a nice study.

Betty Callahan:

As we know that book is significant thing to add our understanding for everything. By a reserve we can know everything you want. A book is a pair of written, printed, illustrated or maybe blank sheet. Every year had been exactly added. This guide An Introduction to Scientific Research Methods in Geography and Environmental Studies was filled about science. Spend your free time to add your knowledge about your

technology competence. Some people has several feel when they reading the book. If you know how big good thing about a book, you can experience enjoy to read a e-book. In the modern era like right now, many ways to get book that you simply wanted.
