Recently updated, this comprehensive handbook explains the aerodynamics of helicopter flight, as well as helicopter maneuvers, unlike many aviation training manuals which are strictly how-to guides. Beginning with the physics of helicopter flight, each step of the process is fully illustrated and thoroughly explained—from the physics of rotorcraft to advanced operations to helicopter design and performance—providing helicopter pilots with a sound base for their in-flight decisions. Containing discussions on the NOTAR (no tail rotor) system, strakes, principles of airspeed and high-altitude operations, this revised edition also includes the latest procedures from the Federal Aviation Administration.
