The Age of STEM: Educational policy and practice across the world in Science, Technology, Engineering and Mathematics (Routledge Research in Education)

The Age of STEM: Educational policy and practice across the world in Science, Technology, Engineering and Mathematics (Routledge Research in Education)

Across the world STEM (learning and work in Science, Technology, Engineering and Mathematics) has taken central importance in education and the economy in a way that few other disciplines have. STEM competence has become seen as key to higher productivity, technological adaptation and research-based innovation. No area of educational provision has a greater current importance than the STEM disciplines yet there is a surprising dearth of comprehensive and world-wide information about STEM policy, participation, programs and practice.

The Age of STEM is a state of the art survey of the global trends and major country initiatives in STEM. It gives an international overview of issues such as:

- STEM strategy and coordination
- curricula, teaching and assessment
- women in STEM
- indigenous students
- research training
- STEM in the graduate labour markets
- STEM breadth and STEM depth

The individual chapters give comparative international analysis as well as a global overview, particularly focusing on the growing number of policies and practices in mobilising and developing talent in the STEM fields. The book will be of particular interest to anyone involved in educational policy, those in education

management and leaders in both schooling and tertiary education. It will have a wider resonance among practitioners in the STEM disciplines, particularly at university level, and for those interested in contemporary public policy.
