The three chapters of this book are entitled Basic Concepts, Tensor Norms, and Special Topics. The first
may serve as part of an introductory course in Functional Analysis since it shows the powerful use of the
projective and injective tensor norms, as well as the basics of the theory of operator ideals. The second
chapter is the main part of the book: it presents the theory of tensor norms as designed by Grothendieck in
the *Resumé* and deals with the relation between tensor norms and operator ideals. The last chapter deals with
special questions. Each section is accompanied by a series of exercises.
