COMBUSTION INSTABILITY (Progress in Astronautics and Aeronautics) M. S. Natanzon

Combustion instability has long been recognized as one of the most important but difficult problems in the development of propulsion systems. The U.S. and the former Soviet Union were simultaneously working during the Cold War to solve the instability problem. However, the scientific basis and engineering approach employed by the Soviets remained largely unknown to the Western world. This book—much of it formerly classified material—is a clear exposition of much of the theoretical work on combustion instabilities, performed in support of the Soviet liquid rocket program during its most vigorous period. While there are similarities between Western and Eastern works, there are many distinct differences. The author was one of the small group of Soviet theorists actively engaged in all of the Soviet liquid rocket programs. His development of the field is firmly grounded in fundamental ideas, and progresses to applications of a general sort. A chapter added since the original Russian edition covers both theory and experiment for bifurcations of dynamical behavior in liquid rocket chambers. The book was written by Professor M.S. Natanzon in Russia and edited by Professor F.E.C. Culick of Caltech, two internationally renowned experts in the field.

From reader reviews:

Margaret Bonner:

The book COMBUSTION INSTABILITY (Progress in Astronautics and Aeronautics) can give more knowledge and also the precise product information about everything you want. So just why must we leave the great thing like a book COMBUSTION INSTABILITY (Progress in Astronautics and Aeronautics)? A number of you have a different opinion about guide. But one aim that will book can give many details for us. It is absolutely suitable. Right now, try to closer using your book. Knowledge or facts that you take for that, you could give for each other; you could share all of these. Book COMBUSTION INSTABILITY (Progress in Astronautics and Aeronautics) has simple shape but the truth is know: it has great and big function for you. You can look the enormous world by open up and read a guide. So it is very wonderful.

Frank Arnett:

Your reading 6th sense will not betray you actually, why because this COMBUSTION INSTABILITY (Progress in Astronautics and Aeronautics) reserve written by well-known writer we are excited for well how to make book that can be understand by anyone who read the book. Written within good manner for you, leaking every ideas and creating skill only for eliminate your own personal hunger then you still hesitation COMBUSTION INSTABILITY (Progress in Astronautics and Aeronautics) as good book not just by the cover but also from the content. This is one guide that can break don't assess book by its deal with, so do you still needing yet another sixth sense to pick this kind of!? Oh come on your examining sixth sense already said so why you have to listening to yet another sixth sense.

Ronald Tanaka:

Are you kind of active person, only have 10 or perhaps 15 minute in your time to upgrading your mind ability or thinking skill also analytical thinking? Then you are experiencing problem with the book when compared with can satisfy your short period of time to read it because this all time you only find reserve that need more time to be examine. COMBUSTION INSTABILITY (Progress in Astronautics and Aeronautics) can be your answer since it can be read by you who have those short free time problems.

Fannie Vincent:

Reading a e-book make you to get more knowledge as a result. You can take knowledge and information from a book. Book is created or printed or illustrated from each source that filled update of news. On this modern era like at this point, many ways to get information are available for a person. From media social similar to newspaper, magazines, science guide, encyclopedia, reference book, fresh and comic. You can add your understanding by that book. Are you hip to spend your spare time to spread out your book? Or just looking for the COMBUSTION INSTABILITY (Progress in Astronautics and Aeronautics) when you desired it?
