Thematic Mapping from Satellite Imagery: An International Report (International Cartographic Association)

Thematic Mapping from Satellite Imagery: An International Report (International Cartographic Association)

This report, produced between 1984 and 1987 in a bilingual edition (English and French), provides a wealth of information on a wide variety of cartographic applications which are being developed to make effective use of new data that is now being collected by Earth observation satellites. At a time when natural resource development and environmental problems have to be taken into account in their entirety, satellites provide an exceptional means of evaluating, synthesizing and creating geographic information. The production of new images, such as the Landsat Thematic Mapper, the SPOT High Resolution Visible Sensor and the adoption meteorological images such as AVHRR sensors on NOAA satellites, which have been extended to thematic domains such as agriculture and glaciology, have led to many new developments as well as problems for the cartographer. These problems are numerous and varied and recur frequently depending on the images and themes being processed e.g. how to select the graphic specification of maps and legends and account for classification accuracy; how to introduce the minimum of topographical data into an image in order to supply users with an adequate geographic reference; when using a physical terrain image, on which, by definition there are no 'blanks' and where no details have been eliminated, how to overcome conceptual difficulties e.g. the side by side placing of different semiological information; the interpretation levels left to reader; achieving a balance between objectivity and readability. Obviously the cartographers role is of prime importance in solving these problems. In order to illustrate the way in which this information is presented, the report provides samples from 33 thematic applications taken from 13 different categories, including agriculture, town planning and water resources. Each application is provided with a descriptive note both in English and French indicating the objective, method and results obtained. This volume provides an important record of current developments in thematic mapping from satellite imagery and should be essential reference for all cartographers.

From reader reviews:

James Hill:

Why don't make it to be your habit? Right now, try to ready your time to do the important work, like looking for your favorite reserve and reading a publication. Beside you can solve your problem; you can add your knowledge by the guide entitled Thematic Mapping from Satellite Imagery: An International Report (International Cartographic Association). Try to stumble through book Thematic Mapping from Satellite Imagery: An International Report (International Cartographic Association) as your buddy. It means that it can to be your friend when you experience alone and beside that course make you smarter than ever. Yeah, it is very fortunate for you personally. The book makes you more confidence because you can know anything by the book. So , let me make new experience along with knowledge with this book.

Charles Felton:

Have you spare time to get a day? What do you do when you have more or little spare time? Sure, you can choose the suitable activity for spend your time. Any person spent their spare time to take a wander, shopping, or went to the particular Mall. How about open or maybe read a book eligible Thematic Mapping from Satellite Imagery: An International Report (International Cartographic Association)? Maybe it is to get best activity for you. You recognize beside you can spend your time with the favorite's book, you can more intelligent than before. Do you agree with their opinion or you have different opinion?

Scott Tucker:

What do you think of book? It is just for students since they are still students or the item for all people in the world, what the best subject for that? Just you can be answered for that problem above. Every person has several personality and hobby for each and every other. Don't to be pushed someone or something that they don't need do that. You must know how great and also important the book Thematic Mapping from Satellite Imagery: An International Report (International Cartographic Association). All type of book is it possible to see on many solutions. You can look for the internet solutions or other social media.

Judith Ellis:

Don't be worry when you are afraid that this book will certainly filled the space in your house, you will get it in e-book technique, more simple and reachable. This kind of Thematic Mapping from Satellite Imagery: An International Report (International Cartographic Association) can give you a lot of good friends because by you looking at this one book you have matter that they don't and make a person more like an interesting person. This particular book can be one of one step for you to get success. This book offer you information that might be your friend doesn't recognize, by knowing more than various other make you to be great folks. So , why hesitate? Let's have Thematic Mapping from Satellite Imagery: An International Report (International Cartographic Association).
